Certifications:

Core JS assessment
CAE assessment

Tech stack summary:

Main: TypeScript, Angular, NgRx, RxJs, Nest.js, Node.js, Jest, Cypress, SQLite, Postgres, Docker, GCP, CI/CD
Secondary: React, Next.js, React Native, Cordova, C#, .NET Core, MSSQL, Azure

Languages:

Russian, Ukrainian - native
English - C1

Education:

V. N. Karazin Kharkiv National University
Master's degree in Math
2008-2013

Bondarenko Oleg
Software Engineer

- My principal technical expertise lies in web development with JavaScript. I have also engaged in commercial development utilizing .NET.
- My domain expertise predominantly involves restaurant software solutions, encompassing Point of Sale systems, kitchen management, inventory control, and in-store servers and peripheral hardware.
- I have served as an instructor for three cohorts specializing in AQA testing and web development within Dev.Pro's educational framework, focusing on core JavaScript and web APIs. Additionally, I possess leadership experience managing small development teams.
- I have some experience with Next.js and React Native, technologies I have applied in personal projects.

Timeline: Jun 2015 - Jun 2023 (8 YOE)

Dev.Pro

Jan 2023 - Jun 2023

In-Store Database Synchronization for POS Application

Key technologies: .NET Core, C#, Azure, Docker, MS SQL

Team composition: Two software engineers and one technical consultant from each side.

Designed and developed services for the client's POS solution to synchronize transactional data between store and cloud in a schema-agnostic manner.

Dev.Pro

May 2022 - Dec 2022

Internal Company Tool Development and Trainee Mentoring

Key technologies: Angular, Nest, PostgreSQL

Team composition: Myself and another senior software engineer supervising a team of twelve trainees

Focused on developing a new internal tool for contractors, where my responsibilities included technical design and detailed code review.

Dev.Pro

Jan 2022 - May 2022

Web UI for In-Store POS and Kitchen Server

Key technologies: Angular, TypeScript, Jest, Cypress

Team composition: A team of approximately 10 individuals. I liaised with a designer, product owner, and technical consultants on the client side; completed the project mostly independently, followed by knowledge transfer to another software engineer.

In response to the client's expansion into a new country, implemented features for local law compliance, including hardware adjustments, internationalization, and a frontend refresh. My specific role was to upgrade the existing frontend to a modern technology stack.

Dev.Pro

Dec 2017 - Dec 2021

POS Application for Restaurant Software Solution

Key technologies: Angular, RxJS, TypeScript, Jest, Protractor, Cordova, SQLite, Node.js, MongoDB

Team composition: Over 50 developers focused on POS; with dedicated business analysts, quality assurance, automated quality assurance, infrastructure, and backend teams.

Engaged in long-term development of a comprehensive restaurant software solution, involving design, implementation, and oversight of feature development across various scopes, internal project tools, end-to-end testing, documentation, onboarding, and feature ownership of a product subdomain. Conducted regular code reviews and maintained communication with all dedicated teams.

Global Logic

Feb 2017 - Nov 2017

Back Office Data Analytics Web Application

Key technologies: Angular, TypeScript, C#, Microsoft Web API, MS SQL, Microsoft PowerBI

Team composition: A team consisting of one senior and several junior software engineers, supervised by a technical consultant, with dedicated QA, database specialist, and business analyst from the client's side.

Developed a web UI from the ground up, embedding interactive charts from a third-party analytics service.

Global Logic

Jun 2015 - Feb 2017

Ecommerce Web Application

Key technologies: C#, VB6, ASP.NET, Microsoft Web API, MS SQL

Team composition: Comprised of two senior specialists in .NET and database management, along with myself.

Provided support for a legacy ecommerce platform, primarily focusing on bug fixes and occasional feature development as requested by the client.
